AMPR

WATER GOT IN. NOW WHAT?

AMPR builds the forensic case that moves your claim forward.

WHEN WATER GETS IN, CARRIERS PUSH BACK

Water intrusion is one of the most contested categories in construction defect claims. Carriers routinely invoke faulty workmanship exclusions, allege pre-existing damage, and cite wear and tear to minimize or deny coverage. AMPR Consulting steps in immediately after a loss to document damage, establish causation, and build the case with zero upfront cost and a resolution-first strategy designed to reach recovery up to 50% faster than the traditional process.

"If you find yourself facing the challenges and stress of construction defects, I highly recommend reaching out to the knowledgeable professionals at AMPR Consulting. Their expertise and guidance truly make a difference."

JIM GALIANO, 5-STAR REVIEW

HOW AMPR HANDLES WATER INTRUSION CLAIMS

FORENSIC TESTING

AMPR deploys IR thermography, moisture mapping, destructive sampling, and hydrostatic testing to document the source and extent of water intrusion.

CAUSATION ISOLATION

AMPR uses forensic reporting to isolate causation before the carrier can generalize a faulty workmanship or cross-suit exclusion.

TIMELINE REVIEW

When carriers allege pre-existing damage or wear and tear, AMPR reviews the documentation record to rebut that position early.

CLAIM COORDINATION

AMPR centralizes communication across owners, carriers, experts, and counsel so the claim moves with a clear strategy.

DON'T LET A WATER INTRUSION CLAIM SIT UNRESOLVED.

Contact AMPR Consulting today to schedule your claim review.
